SHAKE!

Words cannot express our gratitude for your splendid loyalty in supporting our industry through these strenuous years. In days long gone by we were "down" several times, but never "out". Perhaps you can say the same. If so, then you are all the better after a stiff jolt or two.

Happy days are near at hand; hard work, and straight thinking will put us all out in front where we belong, and where we intend to stay.

What do you say?
Are you going along with us?
Our slogan—Better pansies for coming year.

PLEASE!

Greenhouse Special mixed is a typical market strain, O. K. outside. We have dolled it up with some swell new types and have therefore changed its name to Steele's "Aces Mixed" and its just that—exactly.

PREPARING BED FOR GERMINATING SEED.

1. Have your soil clean and pulverized to a depth of six or more inches.
2. On the level surface spread evenly a layer of pulverized manure, compost preferred, to a depth of at least one inch.
3. Overlay manure with half inch of the best soil you have, thoroughly pulverized.
4. Rake down and tamp surface true and smooth.
5. Soak down the bed several inches.
6. Sow in drills or broadcast—drills are better.
7. Cover as lightly as possible with your best soil or sand, mixed 50-50 with peat moss.
8. Use spray of water to moisten surface.
9. Allowing plenty of ventilation, keep your beds moist, quite moist, but not soaking wet, until plants come up.

We use cheapest grade of muslin to retain moisture. As soon as plants begin to come through freely we remove sheeting permanently, and sift tops of beds with thin layer of peat moss. To avoid damping off, water young seedlings very sparingly.

Never allow your beds to become dry. Any dryness after seeds sprout is absolutely fatal. These directions are for sowing in the open field, but will apply when using flats or cold frames. We use 85 to 100 square feet to sow an ounce of seed broadcast.

Alternate your pansy crop with some other crop.

THE UNUSUALLY HIGH GERMINATING QUALITIES OF STEELE'S MASTODON PANSY SEED is a revelation to all extensive growers who use our stock.

LEST YOU FORGET.

We are originators of Mastodon Pansies, and any seed offered as "Mastodon" is not genuine unless grown in our gardens.

DIENER'S PETUNIAS

Over eight thousand florists raised our Petunias last year and we have heard nothing but praise of their high quality. All of our seed bearers are first raised in 3-inch pots and must conform to the type you see in the accompanying picture of this catalog. This makes the producing of the seeds more expensive, but results in the high quality of our seeds. Every plant is dwarf and stocky, no pinching or staking necessary and they sell at sight. Over 500 seeds per trade packet.
